Situation update:

- According to PDMA 345,900 people (49,414 families) were affected by August 2010 floods, mostly in the *Katcha* areas.
- Agriculture was heavily hit as 46,055 acres of arable land was destroyed. This happened while most farmers were ready to harvest rice and had made investments in farming. However, due to high moisture content of the soil, some of the farmers have reportedly managed to cultivate for the next harvest season, though with an increase in debt to achieve this.
- Population from the *Katcha* areas were displaced. The district hosted a significant number of IDPs from other districts. PDMA reports indicate 100,699 people were initially housed in 484 relief camps. Most have returned to places of origin. PDMA reported 100% of the hosted IDPs have left Khairpur, but February 2010.
- Of the total of 50,160 houses which were damaged or destroyed, 46,160 were in the *Katcha* area.
- The UC ranking exercise conducted in late Feb, indicated 3 UCs which are more affected than others. High impact on live stock and housing in particular were of concern.

Key Humanitarian Challenges:

- As this district was moderately affected (compared to neighboring districts), the Government have lead the core relief response. Partners supported with food, shelter, NFIs and other essential provisions. However, it is not a priority district for the humanitarian community.

Taluka	Affected Population	Affected Area (sq km)	# of Affected UCs	# of Camps	Population in Camps	# of Returnees	# of Damaged Houses	# of Damaged BHUs	# of Damaged Schools
